

Polaris Revolve-it Installation Instructions

The Polaris Revolve-it works with suction pool cleaners. Install the pool cleaner according to the manufacturer's instructions prior to installing the Revolve-it.

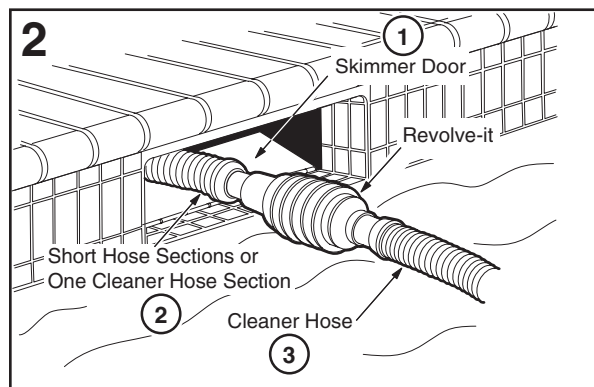

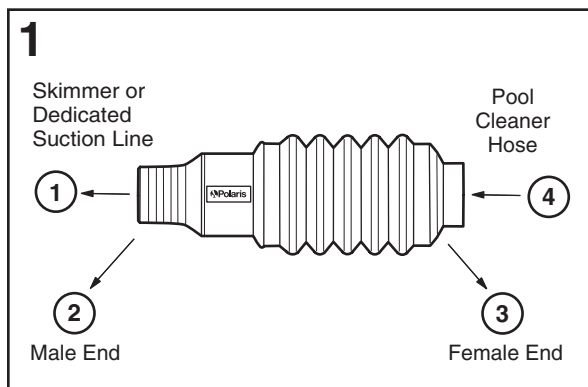

1. Turn off the pool pump.
2. Verify the pump basket and pool filter are clean.
3. Disconnect the cleaner hose from the skimmer or dedicated suction line, leaving any existing flow regulators, adapters and elbows required by the pool cleaner installed. See Diagram 1.
4. a. **Dedicated Suction Line Installation:** Connect the male end of one short hose section into the dedicated suction line. Attach the male end of the Revolve-it to the short hose section. Skip to step 5.

b. **Skimmer Installation:** Attach the two short hose sections together. Connect the male end of the hose assembly to the skimmer and guide the free end through the skimmer door. Attach the male end of the Revolve-it to the hose. Verify the Revolve-it extends far enough out of the skimmer door to prevent interference.

The final installation should look like Diagram 2. If the Revolve-it extends too far into the pool, remove one short hose section. If the Revolve-it is too close to the skimmer door, replace the short hose sections with one cleaner hose section.

5. Reconnect the pool cleaner hose to the female end of the Revolve-it. Reinstall the cleaner according to the manufacturer's instructions. **Note:** It may be necessary to resize the cleaner hose.
6. Turn on the pool pump. Verify each section is securely attached and no leaks are apparent in the hose.
7. When installed properly, the Revolve-it will rotate one-eighth turn each time the pump is turned on or off. It will prevent permanent coils from forming and extend the life of the hose.
